The **EVAL-CN0216-SDPZ** shows the actual test setup. For testing purposes, a 6-wire Tedea-Huntleigh 505H-0002-F070 load cell is used. Current flowing through a PCB trace produces an IR voltage drop, and with longer traces, this voltage drop can be several millivolts or more, introducing a considerable error. A 1 inch long, 0.005 inch wide trace of 1 oz copper has a resistance of approximately 100 mΩ at room temperature. With a load current of 10 mA, this can introduce a 1 mV error.

SYSTEM DEMONSTRATION PLATFORM-SERIAL (SDP-S) CONTROLLER BOARD

RoHS Compliant Available

ANALOG DEVICES

Features:
- USB-to-serial engine
- Peripherals exposed
- SPI
- TWI/I2C
- GPIO
- USB 2.0 PC connectivity
- PC software stack and base firmware provided

The SDP-S is based on a USB to Serial Engine providing connectivity to the PC through a USB 2.0 hight speed port. Controller boards allow for the configuration and capture of data on daughter boards from the PC via USB. The SDP-S has a 120 pin connector which exposes serial interface peripherals to attached SDP compatible daughter boards. The SDP-S has configurable SPI, I2C and GPIOs communication lines. The PC side software application controlling the attached daughter board is provided with each of the daughter product evaluation boards or Circuits from the Lab™ reference circuits.

The SDP-S provides a subset of the capabilities of the SDP-B. The connector pin out used for the SDP-S is the same as the SDP-B but with the unsupported peripherals pins unavailable on the connector. The power and grounding pins are also identical.

iMEMS ADXL345 INERTIAL SENSOR EVALUATION SYSTEM

RoHS Compliant Available

ANALOG DEVICES

The iMEMS® **ADXL345** inertial sensor evaluation system is an easy-to-use evaluation tool targeting bench or desktop characterization of Analog Devices, Inc., inertial sensor products. The system consists of the inertial sensor evaluation board (ISEB), or main board, and a satellite board for any Analog Devices inertial sensor product. The ISEB connects directly to a PC via its USB, where the USB connection provides both power and communications to the board. The ISEB then connects to the satellite board through a ribbon cable. This cable allows the satellite to be easily manipulated for testing or for being separately placed into an environmental chamber for temperature or humidity testing. Separating the boards mitigates corruption of data due to the temperature and humidity effects of other components.

HIGH SPEED USB DATA COLLECTION BOARD

LINEAR TECHNOLOGY

Demonstration circuit **DC890B** along with QuickEval-II™ software provides a USB based Windows PC hosted digital data acquisition system supporting CMOS/LVDS output ADCs up to 250Msps. The **DC890B** must be powered from an external 6±0.5VDC power supply when operating in LVDS mode. When operating in CMOS mode, the external power supply is optional. The Linear Technology supplied QuickEval- II evaluation software automatically detects the **DC890B** and can also detect many of the standard ADC demonstration circuits boards. The **DC890B** will not enable LVDS mode unless an external 6.0VDC power source is available. The QuickEval-II system provides for fast and easy performance evaluation of high speed ADCs.

The 400V, 500V, and 600V devices feature on-resistance down to 0.17Ω, 0.13Ω, and 0.34Ω, respectively. The ultra-low on-resistance values translate into extremely low conduction and switching losses to save energy in high-power, high-performance switch mode applications, including server and telecom power systems, welding, plasma cutting, battery chargers, ballast light, high-intensity discharge (HID) lighting, semiconductor capital equipment, and induction heating.

- Medical equipment

These IGBTs greatly simplify the design of medium power inverters for various industrial applications. Features such as an industry standard low profile package, best in class thermal impedance, and very low loss **6.1 Generation CSTBT™** Silicon facilitate a very efficient, economical, robust inverter design. The **NX-Series** lineup has been expanded to include a 600 amp, 1200 volt dual module to suit a higher power range of applications. New design effort is minimized, as they employ the same standard packaging and features previously introduced for the 5th and 6th Generation **NX-Series**.

SCR THYRISTORS - LESS THAN 20A IT(RMS)

RoHS Compliant Available

Littelfuse® Expertise Applied | Answers Delivered

Features:
- Electrically-isolated package
- High voltage capability — 200V to 1000V
- High surge capability — up to 950A
- Glass-passivated chip
- Tape on reel versions available

The Teccor line of thyristor SCR semiconductors are half-wave, unidirectional, gate-controlled rectifiers which complement Teccor's line of sensitive SCRs. Teccor offers devices with ratings of 1A to 70A and 200V to 1000V, with gate sensitivities from 10mA to 50mA. If gate currents in the 12µA to 500µA ranges are required, see "Sensitive SCRs" section of this catalog. Three packages are offered in electrically isolated construction where the case or tab is internally isolated to allow the use of low-cost assembly and convenient packaging techniques.

The Teccor line of SCRs features glass-passivated junctions to help ensure long-term reliability and parameter stability. Teccor's glass offers a rugged, reliable barrier against junction contamination. Variations of devices covered in this data sheet are available for custom design applications. Consult for more information.

The Teccor line of thyristor SCR semiconductors are half-wave, unidirectional, gate-controlled rectifiers which complement Teccor's line of sensitive SCRs. Teccor offers devices with ratings of 1A to 70A and 200V to 1000V, with gate sensitivities from 10mA to 50mA. If gate currents in the 12µA to 500µA ranges are required, see "Sensitive SCRs" section of this catalog. Three packages are offered in electrically isolated construction where the case or tab is internally isolated to allow the use of low-cost assembly and convenient packaging techniques.
The Teccor line of SCRs features glass-passivated junctions to help ensure long-term reliability and parameter stability. Teccor's glass offers a rugged, reliable barrier against junction contamination. Variations of devices covered in this data sheet are available for custom design applications. Consult for more information.

MOV-14 AND MOV-20 SERIES METAL OXIDE VARISTORS

RoHS Compliant Available

BOURNS®

The MOV -14 and MOV-20 Series of 14mm and 20 mm disc radial leaded varistor devices protect against overvoltage transients such as lightning, power contact and power induction. The metal oxide varistors offer a choice of varistor voltages from 18V to 1800V and V_{rms} voltages from 11V to 1100V. The devices have a high current handling, high energy absorption capability and fast response times to protect against transient faults up to rated limits.

PulseGuard® ESD Suppressors help protect sensitive electronic equipment against electrostatic discharge (ESD). They use polymer composite materials to suppress fast rising ESD transients (as specified in IEC 61000-4-2), while adding virtually no capacitance to the circuit. They supplement the on-chip protection of integrated circuitry and are best suited for low-voltage, high-speed applications where low capacitance is important to ensure minimal interference of data signal integrity. The new and ultra-small surface mount **PGB2** 0402 series offers a RoHS Compliant, Halogen Free, and 100% Lead Free circuit protection alternative.

Littelfuse

Expertise Applied | Answers Delivered

CH series transient surge suppressors are small, metal-oxide varistors (MOVs) manufactured in leadless chip form. They are intended for use in a variety of applications from low voltage DC to off-line board-level protection. These devices, which have significantly lower profiles than traditional radial-lead varistors, permit designers to reduce the size and weight and increase the reliability of their equipment designs.

DIGITAL LOGIC TRAINERS

Global® Specialties

Digital logic trainers are designed with gates and I/Os pre-mounted and each with convenient wire connection points. Both logic trainers eliminate the need to wire discrete ICs on breadboards. All components and I/Os are pre-mounted, de-coupled and de-bounced, so the trainers are ready for immediate classroom use. Included on each is a 270 tie-point solderless breadboard for wiring additional custom logic gates. Most importantly, each trainer comes with an appropriate 60 page training manual featuring overviews of digital logic theory and corresponding detailed hands on experiments (11 labs and 70 experiments). The training manuals are cost effective stand-alone training documents or an excellent supplement and experiment guide to most digital logic textbooks. These two trainers are packaged in a sturdy molded case and come complete with AC/DC Power Adapter and specially-designed, machined pin soldered pre-cut premium #22 gauge insulated stranded hook-up wires.

- GPS
- Handheld entertainment devices
- Industrial equipment
- Personal computing

Features
- Common footprint across the Scalable family from 1.8mm-3.4mm
- Used for grounding between device and PCB to prevent EMI noise and static
- Spring locks into place to help prevent overstretching
- Anti-overstress feature helps prevent contact damage
- Provides shielding from vibration from motors, antennas, speakers and microphones
- Used as a connection for stacking applications between primary and secondary PCBs
- Available in effective heights of 0.3mm - 6.5mm
- Requires limited space on a PCB so it can be designed in at the last minute
- Accommodates soldering and pick-and-place using standard equipment

Spring fingers (also known as shield fingers, grounding springs or universal ground contacts) are used in almost every small printed circuit board application. A spring finger is a single contact, surface mountable, internal connector. It provides and electrical connection and grounding from EMI noise and static between a PCB and other electronic components, such as a secondary PCB, shield cam, antenna, or speaker.

New! **NN30 Series**
Synchronous DC/DC Step-Down Regulator

Panasonic's New NN30 Series integrates power MOSFETs that employ a hysteretic control system. This provides a high-speed response that minimizes output voltage fluctuations in the presence of load current spikes. Panasonic's NN30 Series has a user adjustable output voltage and a maximum current of 10A.

Circuit Protection!
ERZ-E Series ZNRs (MOV)
Zinc-oxide Non-linear Resistor

Outstanding performance now one diameter size smaller! Panasonic introduces the New ERZ-E Series Radial Lead Disc ZNR Transient / Surge Absorbers (MOV). The ERZ-E Series offers a finer, more uniform grain structure which facilitates enhanced performance while allowing for size reduction. Available in 5mm, 7mm, 8mm, 11mm and 14mm sizes!

Hybrid Capacitors!
EEH-ZA & EEH-ZC Series

Panasonic's New Hybrid design Surface Mount Aluminum Electrolytic Capacitors introduce a new technology that combines the benefits of both electrolytic and polymer products producing a capacitor with low ESR, low leakage current, high ripple current and smaller case sizes.

TurboCap™ HIGH-CV SMPS MULTILAYER CERAMIC CAPACITORS

AVX A KYOCERA GROUP COMPANY

Specifications:
- Capacitance Tolerance: ±20%
- Temperature Coefficient: X7R
- Temperature Coefficient: ±15%, -55° to +125°C
- Life Test: 1000 hrs, 200% rated voltage at +125°C

The TurboCap™, MLC capacitors from AVX Corporation are characterized with very high capacitance in a small volume. By vertical stacking of the ceramic elements, the footprint required for mounting the capacitors is greatly reduced. TurboCaps™ are ideally suited as filters in the input and output stages of switch mode power supplies (SMPS). With their ultra-low ESR, these capacitors are designed to handle high ripple current at high frequencies and high power levels.

FLEXIBLE TERMINATION MULTILAYER CERAMIC CAPACITORS (FT-CAP)

SMD — RoHS Compliant Available — The Capacitance Company KEMET CHARGED.

Specifications
- Capacitance Tolerance: ±10%
- Operating Temp. Range: -55°C to +125°C
- X7R Dielectric

The **"Flexible Termination (FT-CAP)"** capacitor is a surface mount multi-layer ceramic capacitor that incorporates a unique, flexible termination system that is integrated with standard termination materials. This technology was developed to address the primary failure mode of MLCC's, flex cracks, which are typically the result of excessive shear stresses produced during board flexure. Flexible termination technology directs board flex stress away from the ceramic body and into the conductive epoxy area, therefore mitigating flex cracks which can result in low-IR or short-circuit failures.

SWITCH MODE POWER SUPPLY STACKED MLC CAPACITORS

AVX — A KYOCERA GROUP COMPANY

Features:
- Operating Temperature: -55°C to +125°C
- Unencapsulated Ceramic Dielectric

DIP Terminal Type — SMD Terminal Type

The SMPS capacitors are designed for high current, high power and high-temperature applications. These capacitors have very low ESR (Equivalent Series Resistance) and ESL (Equivalent Series Inductance). SMPS Series capacitors offer design and component engineers a proven technology specifically designed for programs requiring high reliability performance in harsh environments.

MIL-PRF-49470 SMPS Series capacitors are primarily used in input/output filters of high-power and high-voltage power supplies as well as in bus filters and DC snubbers for high power inverters and other high-current applications. The MIL-PRF-49470 capacitors are preferred over the DSCC drawing 87106 capacitors. MIL-PRF-49470 specification was created to produce a robust replacement for DSCC 87106.

SK/SV SERIES CONFORMALLY LEADED RADIAL MULTILAYER CERAMIC CAPACITORS

RoHS Compliant Available

AVX A KYOCERA GROUP COMPANY

Specifications

- X7R dielectric: -55°C to 125°C
- Z5U dielectric: 10°C to 85°C

SK series capacitors are designed for input or output filtering in switch mode power supplies and are specially processed to handle high currents. The high voltage **SV series** capacitors exhibit low ESR at high frequencies and are ideally suited for applications such as snubbers in high frequency power converters, resonators in SMPS, and high voltage coupling/DC blocking.

135D SERIES WET TANTALUM CAPACITORS

RoHS Compliant Available

VISHAY.

135D Series tantalum-case tantalum electrolytic capacitors incorporate the advantages of all the varieties of electrolytic capacitors and eliminate most of the disadvantages. These units have a 3 volt reverse voltage capability at + 85°C and a higher ripple current capability than any other electrolytic type with similar combinations of capacitance and case size. Operating Temperature: - 55 °C to + 85 °C, up to + 200 °C with voltage derating. Type number suffix of '6' indicates a high temperature film insulation, and suffix of '2' indicates an outer polyester-film insulation.

BestCap® HIGH POWER PULSE SUPERCAPACITORS

RoHS Compliant Available

AVX
A KYOCERA GROUP COMPANY

Applications
- GSM and GPRS based systems
- Non-battery electronic applications
- Communication equipment
- Memory Backup

Features
- Ultra-low ESR
- Low leakage current
- High specific capacitance

S Lead Style
- High power pulse characteristics
- Low profile planar mount
- Non-polar

Lead Style A, L

AVX's BestCap® technology provides excellent high power pulse characteristics based upon the combination of very high capacitance and ultra-low ESR, together with extremely low leakage current. These capacitors have rapidly become recognized, not only as an excellent compromise between "electronic" or "dielectric" capacitors such as ceramic, tantalum, film and aluminum electrolytic, and batteries, but also as a valuable technology for providing a unique combination of characteristics, particularly very high energy, power and capacitance densities.

Accu-P capacitors use very low-loss dielectric materials (silicon dioxide and silicon oxynitride), in conjunction with highly conductive electrode metals to achieve not only a high Q but also low ESR at VHF, UHF, and microwave frequencies. These high-frequency characteristics change at a slower rate with increasing frequency than for ceramic microwave capacitors and are obtained without significant compromise of properties required for surface mounting. The **Accu-P** capacitors also achieve high stability with respect to time, temperature, frequency and voltage variation and have the added advantage of being enhanced for RF power handling capabilities. The terminations are nickel/solder-coated to provide excellent solderability and leach resistance.

LITTLE DEMON™ CARBON COMPOSITION MOLDED RESISTORS

RoHS Compliant Available

OHMITE

Features

- Molded insulation for high dielectric strength
- Rugged construction
- High surge capabilities
- Comparable to "Mil" RC07, RC20, and RC32 types

The Little Demon Series are small, reliable carbon composition resistors with exceptional strength. They are made tough by a molding process that combines the leads, insulation and resistive element into an integrated unit. Along with their small size, Little Demons perform with low noise, dissipate heat rapidly and offer high temperature stability.

VITREOUS ENAMEL EDGEWOUND HIGH POWER RESISTORS

RoHS Compliant Available

multicomp

Features
- Ribbed construction aids in rapid cooling
- Especially constructed for motor starting, dynamic braking, etc.
- Designed for equipment requiring low resistance loads at low ohmic values and high current capacity

Specifications
- Tolerance: ±10%
- Core: Tubular Ceramic
- Terminals: Tinned lug with hole
- Temperature coefficient: ±400 ppm/°C
- Power rating: Based on 25°C free air rating
- Overload: 10 times rated wattage for 5 seconds
- Derating: Linearly from 100% @ +25°C to 0% @ +400°C
- Dielectric withstanding voltage: 1000 VAC measured from terminal to mounting bracket
- Coating: Lead free vitreous enamel except for extreme low resistance 35 watt models, and very large models (1000 watts and up), which are supplied in Silicone Ceramic

These resistors are ideal for applications involving high currents at very low resistance values as low as 0.1Ω for the 300 Watt units. These large, heavy-duty resistors are designed to withstand frequent start-stop cycles characteristic of motor starting, dynamic braking and other similar applications. They are manufactured with corrugated resistive wire. To accelerate cooling, the wire is securely fused to the ceramic core by the protective vitreous enamel coating to improve durability. Corrib resistors are hollow-core units which can be securely fastened to chassis surfaces with thru bolts and brackets. Two mounting brackets required. Mounting brackets available *on this page.*
